

Jojoba Beads: an environmentally conscious alternative to microbeads

Jojoba Beads provide gentle and effective exfoliation to the skin. Jojoba Beads are hard, smooth, free-flowing, botanical microspheres of Jojoba Esters. Jojoba Beads are superior to pumice, nutshells and polyethylene exfoliants because they do not cause irritation or microlacerations to the skin and they deposit Jojoba Esters which provide a smoother skin feel.

Jojoba Beads are the exfoliative of choice in leading facial scrubs, body polishers and soaps, and are internationally approved for cosmetic formulations.

Jojoba beads are 100% biodegradable and are not part of the micro-bead ban.

Functions:

- Exfoliant
- Visual Appeal
- Deposition of Jojoba Emolency

Benefits:

- Hypoallergenic
- Botanical
- Gentle
- Spherical
- Extensive Color Selection

Chemical Information:

- INCI: Jojoba Esters
- Botanical Origin: *Simmondsia chinensis*
- EINECS: 296-292-4
- CAS: 61789-91-1
